

# R4 Takes Delivery Of Tyre Baling Machine

**Many thousands of tonnes of car tyres are disposed of in Northern Ireland each year - creating a pressing problem of waste disposal throughout council areas.**

*Replacement Road Construction,  
Mounbellaw, Co Galway.*

County Armagh company R4 Ltd have developed a range of solutions to effectively deal with this issue, including a state-of-the-art retreading facility, giving waste tyres a new lease of life. R4 was set up several years ago by Lynn Kerr, and has since developed into the province's leading licensed tyre collection firm, providing reprocessing and disposal of used tyres in full compliance with current Duty of Care and EHS legislation. This means R4 can provide clients with full accountability and traceability, enabling them to fully comply with their environmental obligations.

The company have also recently taken delivery of an innovative tyre baling machine that can compress vehicle tyres into blocks, which can then be used for a wide variety of building and civil engineer applications, including ground stabilisation and road structuring. And things don't stop there: R4 are currently looking into ways to develop the tyre bales for a number of new applications - and with a new PAS due shortly, the demand for this sort of technology can only increase.
